

Ready to Deploy Dynamic Data Protection Solution from Celestix and Boole Server

Fremont, California – August 3, 2010 - Celestix Networks, manufacturer of the world's best-selling network security appliances based on Microsoft Forefront Security, and Sunfive S.A, the creator of Boole Server Dynamic Data Protection, today announced that they have entered into a global OEM and marketing agreement.

Boole Server is a secure, scalable system designed to safeguard any sensitive data, while allowing it to be shared with staff, partners and customers as and when needed. With Boole Server, organisations can ensure that their confidential information and intellectual property will not be forwarded, stolen or lost in transit either through malicious or human error as only authorised users recipients can use, edit, copy, print or view specific files and an advanced auditing capability records each file and user activity.

Under the terms of the agreement, Celestix will offer Boole Server as a ready-to-deploy Data Protection Appliance that will be branded as the Boole Security Appliance (BSA). The Celestix BSA appliance will be available in several models and will commence shipping in the third quarter of 2010.

"This agreement makes available to our customers the most feature rich and secure solution for protecting their valuable data to users who reside both within and outside of the trusted domain", said Yong Thye Lin, president of Celestix Networks, "We are offering it as an out-of-the-box and optimized platform, to enable our customers to take advantage of the best-of-breed protection of Boole Server software."

"As part of our growth strategy, this agreement represents a major step as we significantly expand our market reach and brand awareness across multiple international markets", said Andrea Nacmias, director of Sunfive, "We look forward to working with Celestix and their experienced team, to offer a unique solution to the market."
